

# Docker Basic Commands

## Login to hub.wiseman.ee

```
docker login -u afganistan hub.wiseman.ee
```

Password is: Kabul!123

## Pull latest version of the drupal image from hub.wiseman.ee:

```
docker pull hub.wiseman.ee/wiseman/afganistan
```

## Running the Database container

```
docker run -d --name=afganistan-db_psql -e POSTGRES_DB=drupaldb -e  
POSTGRES_USER=drupaluser -e POSTGRES_PASSWORD=1nlnNyHcfyE2 -v  
$HOME/data/postgres:/var/lib/postgresql postgres:10.3
```

## Running the Project container

```
docker run -d --restart always --name afganistan-web -p 0.0.0.0:80:80 --link  
afganistan-db_psql:afganistan-db_psql -v $HOME/data/app:/app  
hub.wiseman.ee/wiseman/afganistan
```

## List the running containers

```
docker ps
```

## List all running and stopped containers

```
docker ps -a
```

## Stop a specific container

```
docker stop afganistan-web
```

## Start a specific container

```
docker start afganistan-web
```

## Remove a specific container

```
docker rm afganistan-web
```

**Create a new bash process inside the container and connect it to the terminal**

```
docker exec -it afganistan-web bash
```

**List all images that are locally stored with the Docker engine**

```
docker images
```

**Delete an image from the local image store**

```
docker rmi hub.wiseman.ee/wiseman/afganistan
```
